

Be Scary But Safe This Halloween!

Decorative lenses are a fun way to change your look. But, contacts aren't one-size-fits-all and require proper care and a prescription.

Visit aoa.org for more information or to find an optometrist near you.

Here are some tips to keep your eyes safe:

Have an in-person, **comprehensive eye examination** to get fitted for the right contacts.

Contact lenses are medical devices. **Make sure your prescription is current.**

Never buy your lenses from retail outlets, or from online sites that **don't require a prescription.**

Don't share lenses with friends; a poor fit and germs can damage your eyes.
